In the Claims:

Please amend the claims as follows:

14. (amended) A prodrug complex comprising a drug bound to a synthetic receptor selected to bind to said drug wherein said synthetic receptor is selected by a method selected from the group consisting of combinatorial selection, monoclonal antibody selection and antibody engineering, wherein said drug preferentially dissociates from the synthetic receptor and binds to a pathophysiologic receptor following administration of the prodrug complex to an organism.

18. (amended) A multi-prodrug complex comprising at least two drugs bound to at least two synthetic receptors, wherein at least one of the synthetic receptors [is selected to] which binds to said drug is selected by a method selected from the group consisting of combinatorial selection, monoclonal antibody selection and antibody engineering, and wherein said drugs preferentially dissociate from the synthetic receptors and bind to pathophysiologic receptors following administration of the multi-prodrug complex to an organism.
